- Experiences in telemedicine and virtual hospital.
- Role of telemedicine in upgrading health infrastructure.
WELCOME MESSAGE

We cordially invite you to attend:

The Second Arab African Telemedicine Conference: Towards Equitable Healthcare
With the rapid demographic global changes, as global ageing, and technological advances new models and approaches are sought to compensate for the discrepancy between needs and resources in healthcare.

It is the vision of Ain Shams University Virtual Hospital (AVH) to provide safe, equitable, cost-effective healthcare for the continent through innovative telemedicine techniques.

We hope through this assembly of eminent attendees and sponsors to converge our priorities subsequently delivering quality healthcare to the African continent especially vulnerable groups and those residing in remote areas.

The theme of the conference is the interplay between needs assessment, priority setting, resource reallocation, policy making, and ICT innovation in delivering sustainable equitable healthcare.

We urge all policy makers to assist in propelling this African initiative beyond restraints and challenges, to patronage and collaborate with our leadership of African telemedicine in a step forward towards the ultimate African healthcare network.

OUR VISION

Develop and Implement new comprehensive medical services in low resource settings. Telemedicine is the tool to achieve equitable healthcare through tailored priority based approach involving human capacity and infrastructure soaring.
The conference mainly target Policy makers, healthcare stake holders, medical technology experts, health economics experts, healthcare workers and rehabilitation therapists.
